THE OCEANIA STORY

ECONYL®

ENDLESS POSSIBILITIES

LET'S MAKE A DIFFERENCE...

Healthy Seas ghost divers collect abandoned fishing nets and other tackle from the World's oceans and seas. Together with fabric scraps from mills and carpets destined for landfill, they are transformed into the versatile fibre that is ECONYL®.

This fibre is then turned into wearables and carpet.

We are delighted to be launching our second premium velvet range, Oceania, created from ECONYL®.

We have also partnered with the charity Healthy Seas. A percentage of all sales from Oceania will be donated to Healthy Seas, to support their great work in clearing the seas of discarded fishing nets and helping marine life across the planet.

HEALTHY  SEAS®
a journey from waste to wear

Sandringham has long been associated with beautiful, high quality velvet pile carpets. We have continued this quality and beauty with our newest range - Oceania - sister to Maribella. Constructed from ECONYL® regenerated nylon, Oceania offers the opportunity to embrace a stunning carpet with the chance to make a contribution to the environment.

We think it is stunning, and challenge you tell the difference!

Oceania is not just a beautiful looking carpet:

- Environmentally friendly
- Hard wearing
- Stain resistant
- Heavy domestic rating and suitable for rooms in contract locations
- Low tog rating of 0.9 - ideal for underfloor heating
- IUV resistant - so won't fade in the sun
- Bleach resistant at 1/10 household bleach/water
- Moth proof
